

## **New Features – October 2013**

Your comments continue to inform the upgrades we make to the system, so please keep sharing your ideas with us on the “Community Q&A” tab on our Customer Support page at [lowes.com/iris](http://lowes.com/iris). A number of new services have been implemented within Iris. Each product’s specific in-store or online availability may occur after this software release. Check [lowes.com/iris](http://lowes.com/iris) often to find the latest and greatest product availability.

### **More scheduling options**

Premium customers can now schedule magic to happen at sunrise and sunset! Use it to turn on your porch light for a couple of hours when it gets dark!

### **First Alert Smoke and Smoke/CO Detectors**

Iris can now alert you to Smoke or Carbon Monoxide in the home even when you’re away. Check out the new products from First Alert that work with Iris.

### **Filter Reminders**

Thermostat users can now ask Iris to track the life of their filters, customizable based on your run time and manufacturer’s recommendation. Never miss a filter change again!

### **Sylvania LED light bulbs**

You can now communicate directly with your light bulbs! Keep your home’s energy usage down, by simply screwing in a light bulb – no need to use smart plugs or change our switches. Check out our new BR30 bulbs from Sylvania.

### **Bali Blinds**

Open and close your window blinds from your bed, from your office desk or from the beach on vacation. Our new motorized blinds will allow you to control your preferred blind setting for any time of day or night from wherever you are! Visit a Lowe’s store for more information on controllable Bali blinds options.

### **More Locks!**

We’ve increased the selection of locks that work with Iris, giving you more choices and ways in which to secure your home. Additionally premium lock users can now schedule when their contacts can access their home. You could set a service person’s PIN to open the lock just one morning a week. It is like giving a virtual key to your home that you can delete at any time (and have a record of when they have come and gone!).
